

VisionLink Community of Practice Sessions

October is here, and with it comes a new month of Community of Practice Sessions from VisionLink.

Please join us for this month's sessions which are all dedicated to the critical topic of "Data Exchange/ Data Standards". These sessions will focus on both resource and client data. Data sharing is an essential element of sound social service delivery. Non-profit organizations working together to serve the needs of their community face the critical challenge of sharing information among themselves, their respective stakeholders, and the public. This need for data underscores the need for data standards.

Check out the schedule for the October Community of Practice Sessions below and rsvp to hrivnak@visionlink.org to reserve your space (note: sessions are limited to **existing** customers and their staff). Once registration is closed, you will receive a confirmation email with corresponding dial-in and WebEx log-in access codes as appropriate for your session.

Make sure to register for the October sessions and mark them on your calendar!
