

VisionLink Community of Practice Sessions

VisionLink's Community of Practice is certainly growing! The last two sessions had the largest number of participants, and discreet sites represented, so far! The "Resource Profiles" Design Session was such a hit that we are including it in the upcoming on site Design Studio Sept. 25th, and the "Building Capacity Using the CommunityOS Handbook" call generated some wonderful ideas while connections among customer sites were strengthened.

In addition to the demo and discussions above, Doug also presented a Feature Review of the "Tracking Value of Referrals & Services."

Check out the schedule for the September Community of Practice Sessions below and rsvp to hriwnak@visionlink.org to reserve your space (note: sessions are limited to **existing** customers and their staff). Once registration is closed, you will receive a confirmation email with corresponding dial-in and WebEx log-in access codes as appropriate for your session.

And, for the on-site Design Studio in Boulder, we will send additional information as appropriate. Please do plan on attending!

Make sure to register for the September sessions and mark them on your calendar!
